Rail Repair ERP System

Provides status and Promise Out Date (POD) for cars in shop, cars in route to shops, and provides Inspection to Billing Repair Card (BRC) in one easy step.

The Rail Repair ERP System provides integrated workflow functionality from inspection to invoice. It tracks car status throughout the repair process, allowing the user to view projected release and status versus POD by car.

The system incorporates UMLER, AAR, NITL codes, assigns materials, labor and gives you the ability to compare standard estimated costs to actual. Labor and materials can be planned to the projected capacity of the repair facility. Shop and mobile units have the ability to integrate via hand held computers allowing remote access to the central system in real time.
